

## Care of your Keyboard

### Keyboard

If you are using an electronic keyboard, you will not expect to have to maintain it in the same way as a piano. It will not require tuning, and it will not be so badly affected by humidity and temperature changes.

However, like any other electronic gadget, it will last considerably longer if it is not exposed to extremes of temperature, and certainly not to damp.

Do not keep it against a radiator. You will need to keep it clean, and a microfibre cloth wrung out in clean water will work very well. It is essential to disconnect it from the electricity supply before you start cleaning though.

As with any other electric machine, make sure that you check the cable from time to time to make sure it is not damaged.

If you encounter any problems with your instrument seek advice from the Music Centre or your child's instrument teacher.
